## **OPEN LAB EIGHT** EVALUATION RUBRIC

|                        | Description  | Points |
|------------------------|--|--------|
| Program<br>Development | If program has compilation error.  | -50    |
|                        | If program terminates with run time error.   | -50    |
| Documentation          | Main Comment Block contains: (due date (1), author name(1), course-section #(1), and program description (2)).   | 5      |
|                        | Comments have been added to each group of logically related statements   | 8      |
|                        | <ul> <li>above each decision statement (if, if/else)</li> <li>above each loop statement</li> <li>above one or more sequence statements that together accomplish a cohesive task</li> <li>above each function definition (3 pts)</li> </ul>   |        |
| Style                  | Variable:  | 2      |
|                        | <ul> <li>Meaningful variable names are used unless specified by the program description</li> <li>Variable naming convention is followed</li> <li>No global variable is used</li> </ul>   |        |
|                        | Indentation and white spaces are used to make the program easier to read.  | 5      |
|                        | All the decision statements are indented properly.   |        |
|                        | All the repetition statements (loops) are indented properly  |        |
|                        | Blank lines are used in front of each block of logically related statements  |        |
| Correctness            | Program solves the assigned problem using methods described in program description:  | 30     |
|                        | <ul> <li>Sorted linked list is used to store the parts</li> <li>4 user defined functions are implemented as discussed in the project description</li> <li>Correct type of parameters and correct function return types are used in each user defined function</li> <li>Main function logic is implemented correctly where a loop is used to iterate through all the operations in the data file</li> </ul> |        |
|                        | Program produces the correct output.  Makefile used for compiling and generating executable file Table of parts and quantities before the operations Table of parts and quantities after the operations performed  | 50     |
| TOTAL                  |  |        |
